Job Description: Agent Developer Intern

Date: 23rd March 2026

About STAIR Digital

STAIR Digital is a next-generation strategy, AI, and capital advisory firm operating at the intersection of:

- AI-led enterprise transformation
- Tech-enabled investing
- Capital advisory & investment banking

Founded by:

- Shailesh V. Haribhakti – Veteran corporate leader, governance expert, board member across India's leading listed companies.
- Shubham Saraff – Global AI expert, Oxford MBA, researcher in neural networks, and advisor on AI-led enterprise transformation.

Our Tech Consulting arm works closely with promoters, investors, and institutional stakeholders to structure, evaluate, and execute AI Interventions with precision and speed.

The Role

We are hiring an Agent Developer Intern **(final-year students / recent graduates)** to work directly under the strategic guidance of **Shubham Saraff** on enterprise AI and technology transformation mandates.

This is a structured internship designed for individuals who want hands-on exposure to enterprise AI deployment. Interns will work closely with the core team on live projects and are expected to contribute meaningfully to both technical execution and problem-solving.

You will not be building slides from a distance. You will be working inside large enterprises — Translating AI strategy into **working AI systems and deployable agents inside enterprise workflows.**

42, Free Press House, 215, Free Press Journal Marg,
Nariman Point, Mumbai, Maharashtra 400021

This role requires the ability to operate at two levels simultaneously:

1. **Strategic Level** – Understanding how AI reshapes business models, cost structures, operating leverage, and competitive positioning.
2. **Execution Level** – Translating that strategy into workflows, system integrations, pilots, dashboards, and measurable performance improvements.

You will engage directly with:

• CXOs and business heads
• Enterprise IT and digital teams
• AI vendors and technology partners
• Internal transformation task forces

This is a high-accountability, high-learning role designed for individuals who want deep exposure to real enterprise transformation.

What You Will Work On

Your work will be execution-heavy, analytically rigorous, and commercially sensitive.

AI Agent Development & Deployment

You will design and deploy production-grade AI agents capable of automating enterprise workflows and augmenting human decision-making.

- Build LLM-powered agents capable of multi-step reasoning and tool usage
- Design agent architectures using frameworks such as LangChain, LlamaIndex, AutoGen, CrewAI, or similar systems
- Develop Retrieval-Augmented Generation (RAG) pipelines using enterprise data sources
- Integrate agents with enterprise systems (ERP, CRM, internal databases, APIs)
- Design memory, context management, and workflow orchestration for multi-agent systems
- Deploy agents in secure enterprise environments (cloud, on-premise, or hybrid)

saraffshubham@gmail.com

- Monitor agent performance, latency, cost, and reliability
- Improve prompts, reasoning chains, and tool integrations for production stability

You must be comfortable navigating both business discussions and technical realities.

Research & Technology Evaluation

• Track global AI developments and emerging enterprise tools
• Evaluate AI vendors (technical depth, scalability, cost structure)
• Conduct benchmarking across industries
• Prepare structured technical notes for CXO-level conversations

---

AI Use Case Identification & Implementation

• Identify high-impact AI use cases across Finance, Operations, GTM, HR, Supply Chain, and Technology
• Conduct feasibility assessments (data readiness, integration complexity, ROI potential)
• Support pilot execution and proof-of-concept development
• Translate AI concepts into practical deployment roadmaps
• Work with engineering and vendor teams to operationalize solutions

You will not just recommend AI solutions — you will build and deploy them.

Who This Role Is For

This role is ideal for individuals with:

• Final-year students, or recent graduates, in technology, AI, or related fields (including internships, academic projects, or independent work)
• Experience building applications using LLM APIs (OpenAI, Anthropic, open-source models)
• Experience with agent frameworks (LangChain, CrewAI, AutoGen, LlamaIndex, etc.)
• Experience building RAG systems and vector search pipelines
• Ability to integrate AI agents with APIs, databases, and enterprise systems
• Understanding of hardware and software requirements for deploying AI agents (compute, memory, latency considerations, cloud vs on-premise environments, and system scalability)
• Familiarity with cloud deployment environments (AWS / GCP / Azure)

saraffshubham@gmail.com

Preferred but not mandatory:

• Experience with enterprise tools.
• Exposure to AI deployment (LLMs, automation workflows, analytics systems)
• Engineering or technical academic background (preferred for internship candidates)

What Makes This Role Different

• Direct exposure to enterprise-scale AI transformation
• Strategic mentorship under Shubham Saraff
• Interaction with board-level and CXO-level stakeholders
• Cross-exposure to capital strategy and governance thinking
• Steeper learning curve than conventional tech consulting roles

This is not a ticketing-support or routine implementation job. This is enterprise transformation from the inside.

Location & Working Model

- **Location:** Hybrid / Virtual flexibility
- Flexible working hours with high accountability

Growth Trajectory

High performers can evolve into:

• AI Transformation Lead
• Enterprise Technology Strategist
• Vertical Technology Head
• Investment and portfolio advisory roles within the STAIR ecosystem

Performance compounds quickly in this environment.

Remuneration

CONTACT US
Shubham Saraff
+91 9930220342
saraffshubham@gmail.com

We understand that strong analytical talent has meaningful market opportunities.

For candidates who were previously in discussion with us, we are open to revisiting and improving upon the earlier withdrawn remuneration structure, based on demonstrated capability and role fit.

This is a paid internship, with compensation structured based on candidate capability and contribution.

For exceptional candidates with proven understanding depth and enterprise level exposure, we are prepared to offer a meaningful step-up to align with both market standards and the responsibility level of this role.

At STAIR, compensation reflects value creation — not hierarchy.

Who Should Not Apply

- Those seeking purely coding-only or isolated developer roles
- Those uncomfortable interacting with senior stakeholders
- Those who prefer rigid scope definitions over dynamic problem-solving
- Those looking for low-intensity work environments

Why Join Now?

Large enterprises in India are at a structural AI inflection point.

Under the leadership of **Shubham Saraff**, you will help shape how AI is embedded into real businesses — not theoretical case studies.

If you are technically capable, strategically curious, and execution-driven — this role can accelerate your career trajectory meaningfully.
